The Engine Cooling System

When a car's engine is running, be it diesel or petrol, not all the energy contained in the fuel is turned into power that will make the vehicle move. Depending on the engine speed and running conditions, around 30% of the 'chemical energy' contained in the fuel is dispersed as heat generated by combustion. If this heat is not controlled, the increased temperature it produces may compromise the structural integrity of the engine itself.

The solution is provided by the car's engine cooling system. Its main purpose is to maintain the temperature of the metal parts of the engine within certain limits, in order to guarantee the engine's continued performance and reliability.

The principal components of the engine cooling system are heat exchangers, including Radiators, Cooling Fans, Heater Cores, Intercoolers, Oil Coolers and Condensers. These take the fuel energy that is not converted into power to move the vehicle, and dispose of it into the atmosphere. Automotive heat exchangers consist of a bundle of small tubes which contain the hot fluid to be cooled. Thin metal fins are fixed onto the tubes, which 'extract' the heat from the tubes by conduction; and dissipate it into the surrounding air by convection. The tubes and fins of automotive heat exchangers are made of metals with a high level of conductivity a nd light weight, allowing for even thin surfaces to be machined.

The DENSO difference

Pioneering design. Ultra-efficient performance. Manufactured to OEM quality. These are the exceptional standards behind DENSO's replacement engine cooling ranges – bringing world class heat exchage technologies direct to the aftermarket.

Not only one of the world's largest automotive component suppliers, DENSO is also a global leader in the development and manufacturer of engine cooling parts and systems.

Now this pioneering expertise is available to aftermarket customers in our extensive, OE quality Engine Cooling programme; including Radiators, Cooling Fans, Heater Cores, Intercoolers, Oil Coolers and Condensers.

We recognise that heat exchange performance depends on the technology used. DENSO's advanced heat exchange ranges therefore include both braze welding and mechanical deformation technologies to provide the ideal solution for every vehicle. Braze welding produces a 'closer' contact between tube and fin, and guarantees more efficient heat transmission. Mechanical deformation technology – where the tube is 'pressed' against the fin – offers slightly less contact, but with the advantage of lower cost. Every DENSO Radiator is especially developed for the car and engine they are to be fitted to, and rigorously tested; so efficient performance is guaranteed. A DENSO Radiator with a 0.2 sq.m front surface, for example, features more than 6 sq.m of cooling surface on its fins.

So when you need a replacement engine cooling product, there's only one name to choose: DENSO.

Engine Cooling | Range

GB

World-leading technologies

DENSO Cooling Radiators

The radiator is the heart of the engine cooling system, releasing the heat extracted from the engine into the atmosphere.

Usually the radiator is located in the front side of the vehicle near to the air intake, in order to exploit the dynamics of speed while the car moves forward.

In cars that are equipped with an air conditioning system, the Radiator will be larger and more powerful in order to dissipate the heat discharged by the Condenser. DENSO Radiators – co-developed with air conditioning experts – are able to meet every running requirement, even under the most challenging environmental conditions.

DENSO Condensers

The Condenser is a heat exchanger that forms part of the vehicle air conditioning system. Its function is to condense the refrigerant in the A/C cycle.

As a heat exchanger, the Condenser's structure is similar to that of the Radiator, but it has to withstand the high internal pressures (up to 25Bar) that are typical for air conditioning systems.

DENSO Condensers, particularly our most recent applications, have an integrated filter system to ensure even greater efficiency of the air conditioning system.

DENSO Heater Cores

The task of this heat exchanger is to provide heat to the vehicle cabin. In a simple process, engine coolant crosses the heater at a high temperature, providing heat when the cabin fan control is switched on from the dashboard.

A Heater Core is installed in both climate controlled and heater-only vehicles.

DENSO Intercoolers

The Intercooler is a heat exchanger that cools the air entering the turbine of a turbocharged engine. The use of Intercoolers is increasing thanks to the growing presence of supercharged engines.

DENSO's experts are continually enhancing the design of our Intercoolers, with a particular focus on achieving reduced fuel consumption and emissions.

DENSO Cooling Fans

The role of the engine Cooling Fan is to increase the flow of cooling air that reaches the Radiator. Although usually positioned behind the heat exchanger (Radiator), in some applications the Cooling Fan is placed in front of the Radiator to increase the flow of cooling air whilst travelling slowly or when stationary.

Cooling Fans operate using a solenoid valve, controlled by temperature sensors and coolant pressure sensors and activated only when needed. Cars that are fitted with an air conditioning system require a Cooling Fan featuring a more powerful solenoid valve. DENSO Cooling Fans meet even the most demanding vehicle need. Thanks to their accurate fluid dynamics calculations, they also guarantee reduced noise and increased efficiency.

DENSO Cabin Blower Fans

Containing an impeller and electrical motor, the Cabin Blower Fan – located inside the car's air conditioning unit - generates a flow of air which passes through the A/C unit and into the vehicle cabin, to cool or heat it.

The amount of air generated by the Cabin Blower Fan depends on the air permeability of each of the components that make up the car's cabin ventilation system; namely the external air intake (below the windscreen), the air conditioning unit, the air ducts in the cabin/ cockpit module, and the cabin itself.

DENSO Oil Coolers

The Oil Cooler is an exchanger that controls the temperature of lubricants such as the engine oil, gearbox and power steering oil inside the engine.

Excessively high temperatures lead to a rapid degradation of the oil's lubrication characteristics, with the risk of damaging mechanical parts.

D

Die Motorkühlung

Bei laufendem Motor wird in Diesel- wie in Ottomotoren nicht die gesamte im Kraftstoff enthaltene Energie in Leistung zum Antreiben des Fahrzeugs umgesetzt. Je nach Motordrehzahl und Betriebsbedingungen werden etwa 30 Prozent der im Kraftstoff enthaltenen „chemischen Energie" als Verbrennungswärme freigesetzt. Wenn diese Wärme nicht reguliert wird, kann der dadurch verursachte Temperaturanstieg zu einer unmittelbaren Beschädigung des Motors führen.

Gelöst wird diese Aufgabe von der Motorkühlung des Wagens. Ihre Hauptfunktion ist es, die Temperatur der Metallteile des Motors innerhalb der vorgesehenen Grenzen zu halten, um die fortgesetzte Leistungsfähigkeit und Zuverlässigkeit des Motors zu gewährleisten.

Die grundlegenden Bauteile der Motorkühlung sind Wärmetauscher wie Motorkühler (Radiatoren), Lüfter, Heizungswärmetauscher, Zwischenkühler, Ölkühler und Kondensatoren. Sie dienen zur Ableitung der Energie, die bei der Verbrennung im Motor nicht in Antriebskraft umgesetzt wird, nach außen an die Luft. Wärmetauscher für Kraftfahrzeuge bestehen aus einem Bündel dünner Rohre, durch die die zu kühlende heiße Flüssigkeit strömt. An den Rohren sind dünne Metallrippen angebracht, die durch Wärmeleitung die Wärme aus den Rohren abziehen und sie durch Konvektion an die Umgebungsluft abgeben. Die Rohre und Rippen in Kfz-Wärmetauschern sind aus Metallen mit hoher Wärmeleitfähigkeit und geringem Gewicht, aus denen gleichmäßige dünne Flächen hergestellt werden können.

Der DENSO-Unterschied

Bahnbrechendes Design. Extrem effiziente Leistung. Erstausrüsterqualität. Diese außergewöhnlich hohen Maßstäbe bilden die Grundlage für die Ersatzteile im Motorkühlungssortiment von DENSO – und bringen dadurch Wärmeübertragungstechnik von Weltklasse direkt in den Aftermarket-Bereich.

DENSO ist nicht nur einer der größten Hersteller von Kfz-Bauteilen der Welt, sondern auch ein weltweit führender Entwickler und Hersteller von Motorkühlungsteilen und -systemen.

Dieses wegbereitende Knowhow ist in Form unseres umfassenden Sortiments von Motorkühlungsteilen in Erstausrüsterqualität jetzt auch für Aftermarket-Kunden erhältlich.

Wir sind uns der Tatsache bewusst, dass die Wärmeübertragungsleistung jeweils von der verwendeten Technik abhängt. Die hochentwickelten Wärmetauschersortimente von DENSO beinhalten daher gelötete und mechanisch gepresste Ausführungen und bieten somit die jeweils ideale Lösung für jedes Fahrzeug. Mit Löten erhält man einen „engeren" Kontakt zwischen Rohr und Rippe, was eine effiziente Wärmeübertragung gewährleistet. Die mechanische Verbindung – bei der das Rohr auf die Rippe aufgepresst wird – bietet geringfügig weniger Kontakt, hat aber den Vorteil, dass sie kostengünstiger ist. Jeder DENSO-Kühler wurde speziell für das Auto und den Motor entwickelt, in die er eingebaut werden soll, und streng getestet, so dass seine effiziente Leistung garantiert ist. Ein DENSO-Kühler mit einer Frontfläche von 0,2 m^2 verfügt zum Beispiel dank seiner Rippen über eine Kühlfläche von mehr als 6 m^2.

Für Ersatz-Motorkühlungsprodukte gibt es deshalb eigentlich nur eine Wahl: DENSO

D

Weltweit führende Technologien

DENSO-Motorkühler

Der Motorkühler bildet den Kern des Motorkühlungssystems. Er gibt die überschüssige Motorwärme an die Luft ab.

Der Kühler befindet sich gewöhnlich vorne im Fahrzeug, in der Nähe des Luftansaugteils, um die Dynamik der Geschwindigkeit während der Vorwärtsfahrt zu nutzen.

In Fahrzeugen mit einer Klimaanlage ist der Kühler größer und leistungsstärker, um die vom Kondensator abgegebene Wärme abzuleiten. DENSO-Kühler, die in Zusammenarbeit mit Klimaanlagenexperten entwickelt werden, können alle Betriebsanforderungen erfüllen, selbst unter den widrigsten Umgebungsbedingungen.

DENSO-Kondensatoren

Der Kondensator ist ein Wärmetauscher, der einTeil der Klimaanlage von Fahrzeugen bildet. Er hat die Aufgabe, das Kältemittel im Kreislauf von einem gasförmigen in flüssigen Aggregatzustand zurückzuverwandeln.

Als Wärmetauscher hat der Kondensator einen ähnlichen Aufbau wie der Motorkühler, er muss aber den für Klimaanlagen typischen höheren Innendrücken (bis zu 25 bar) standhalten können.

DENSO-Kondensatoren und insbesondere unsere jüngsten Anwendungen haben ein integriertes Filtersystem, das eine noch größere Effizienz der Klimaanlage gewährleistet.

DENSO-Heizungswärmetauscher

Die Aufgabe dieser Wärmetauscher ist es, Wärme an den Fahrzeuginnenraum abzugeben. In einem einfachen Prozess wird Motorkühlmittel mit hoher Temperatur über den Heizungswärmetauscher geleitet und liefert dadurch Heizungswärme, wenn das Innenraumgebläse am Armaturenbrett eingeschaltet wird.

Ein Heizungswärmetauscher ist sowohl in Fahrzeugen mit Klimaanlage als auch in nur mit Heizung ausgestatteten Fahrzeugen eingebaut.

DENSO-Ladeluftkühler

Der Ladeluftkühler oder Intercooler ist ein Wärmetauscher, der die in die Turbine eines Turbomotors einströmende Luft kühlt. Aufgrund der steigenden Zahl von aufgeladenen Motoren finden auch Ladeluftkühler zunehmend mehr Verwendung.

Die Experten von DENSO arbeiten ständig an der Optimierung der Konstruktion unserer Ladeluftkühler. Ihr Schwerpunkt liegt dabei darauf, einen sparsameren Kraftstoffverbrauch und geringere Emissionen zu erzielen.

DENSO-Lüfter

Der Motorlüfter hat die Aufgabe, den Kühlungsluftdurchsatz zum Motorkühler zu steigern. Er ist gewöhnlich hinter dem Wärmeaustauscher (d.h. dem Kühler) angeordnet, in einigen Anwendungen ist der Lüfter aber an der Kühlervorderseite montiert, um den Kühlungsluftstrom bei langsamer Fahrt und im Stillstand zu vergrößern.

Lüfter werden von einem Magnetventil betätigt, von Temperaturfühlern und Kühlmitteldrucksensoren überwacht und nur bei Bedarf zugeschaltet. Für Fahrzeuge mit Klimaanlage wird ein Lüfter mit einem leistungsstärkeren Magnetventil benötigt. DENSO-Lüfter erfüllen selbst die anspruchsvollsten Einsatzbedingungen. Dank präziser Fluiddynamikberechnungen gewährleisten sie auch einen geräuschärmeren Betrieb und eine höhere Effizienz.

DENSO-Innenraumgebläse

Das ein Gebläserad und einen Elektromotor enthaltende Innenraumgebläse in der Kfz-Klimaanlage erzeugt einen Luftstrom, der durch die Klimaanlage und in den Fahrzeuginnenraum hinein strömt, um die Innenraumtemperatur nach Bedarf senken oder zu erhöhen.

Der vom Innenraumgebläse erzeugte Luftvolumenstrom hängt von der Luftdurchlässigkeit jedes der Bauteile ab, aus denen sich die Innenraumbelüftungsanlage des Wagens zusammensetzt, d.h. dem Frischlufteinlass (unten an der Frontscheibe), der Klimaanlage, den Luftkanälen im Innenraum-/Cockpitmodul und dem Innenraum selbst.

DENSO Ölkühler

Der Ölkühler ist ein Wärmetauscher, der die Temperatur von Schmierstoffen wie dem Motoröl, dem Getriebeöl oder dem Servolenkungsöl im Motor reguliert.

Hohe Temperaturen führen zu einer schnellen Verschlechterung der Schmiereigenschaften des Öls und dem Risiko einer Beschädigung von mechanischen Bauteilen.

F

Le système de refroidissement du moteur

Lorsqu'un moteur de voiture fonctionne, qu'il soit à essence ou diesel, toute l'énergie contenue dans le carburant n'est pas transformée en puissance motrice. Selon le régime et les conditions de fonctionnement du moteur, environ 30% de 'l'énergie chimique' du carburant est dispersée sous forme de chaleur générée par la combustion. Si cette chaleur n'est pas maîtrisée, l'augmentation de température qu'elle génère peut atteindre des valeurs critiques pour l'intégrité structurelle du moteur.

La solution est fournie par le système de refroidissement du moteur. L'objectif principal du système de refroidissement est de maintenir les températures du métal dans les limites prévues pour assurer les performances et la fiabilité du moteur.

Les principaux composants du sytème de refroidissement du moteur sont les échangeurs de chaleur : les radiateurs de refroidissement, les groupes moto-ventilateurs, les radiateurs de chauffage, les intercoolers, les radiateurs d'huile et les condenseurs. Ils assurent la dispersion dans l'atmosphère de la part de l'énergie contenue dans le carburant qui n'est pas transformée en énergie disponible pour le mouvement du véhicule. Les échangeurs de chaleur de voiture se composent d'un faisceau de petits tubes contenant le fluide chaud à refroidir. Des petites ailettes en métal fixées à ces tubes absorbent par conduction la chaleur du fluide et la diffusent par convection dans l'air environnant. Les tubes et les ailettes d'un échangeur de chaleur pour automobile sont constitués de métaux qui offrent une bonne conductibilité, légèreté et usinabilité à des épaisseurs réduites.

La différence DENSO

Conception innovatrice. Performance ultra efficace. Fabrication de qualité d'équipement d'origine. Telles sont les normes exceptionnelles qui caractérisent les gammes de systèmes de refroidissement de moteur DENSO – apportant des technologies d'échangeurs de chaleur de classe mondiale au marché de la rechange.

DENSO est non seulement l'un des plus grands fournisseurs internationaux de pièces automobiles mais également un leader mondial en matière de développement et de fabrication de pièces et de systèmes de refroidissement du moteur.

Notre vaste programme de qualité OE de systèmes de refroidissement du moteur dont les radiateurs de refroidissement, les groupes moto-ventilateurs, les radiateurs de chauffage, les intercoolers, les radiateurs d'huile et les condenseurs permet désormais aux clients du marché de la rechange de bénéficier de ce savoir-faire innovateur.

La performance d'échange de chaleur dépend de la technologie utilisée. Les gammes d'échangeurs de chaleur évolués de DENSO intègrent les technologies du soudobrasage et de la déformation mécanique afin de fournir la solution idéale pour chaque véhicule. Le soudobrasage permet un meilleur contact entre le tube et les ailettes et assure une transmission plus efficace de la chaleur. La technologie de la déformation mécanique – où le tube est 'pressé' contre les ailettes – offre légèrement moins de contact mais avec l'avantage d'un coût plus faible. Chaque radiateur DENSO est développé spécialement pour le véhicule et le moteur qu'il va équiper. Il est testé de manière rigoureuse de façon à garantir une performance exceptionnelle. Un radiateur DENSO d'une surface frontale de 0,2m^2 dispose en réalité une surface d'échange totale au niveau des ailettes de plus de 6m^2.

Lorsqu'il vous faut un produit de refroidissement du moteur de rechange, un seul nom s'impose : DENSO.

F

Technologies leaders mondiales

Radiateurs de refroidissement DENSO

Le radiateur est le coeur du système. Il joue un rôle majeur qui consiste à disperser dans l'atmosphère la chaleur accumulée par le liquide de refroidissement dans les différentes parties du moteur.

Le radiateur de refroidissement est généralement situé à l'avant du véhicule, à proximité des prises d'air pour exploiter l'effet dynamique généré à la vitesse.

Dans les voitures équipées de systèmes de climatisation, on utilise des radiateurs de refroidissement plus puissants afin d'évacuer en même temps la chaleur provenant du condenseur. Les radiateurs DENSO, développés en étroite collaboration avec les experts interne de la climatisation, assurent les meilleures performances du moteur tenant compte les températures extérieures élevées et les conditions extrêmes d'utilisation.

Condenseurs DENSO

Le condenseur est un échangeur de chaleur qui fait partie du système de climatisation du véhicule. Sa fonction est de condenser le liquide réfrigérant pendant son cycle de refroidissement.

Cet échangeur thermique a une structure similaire à celle du radiateur mais il doit résister à des pressions internes élevées (jusqu'à 25 bars), valeurs propres aux systèmes de climatisation.

Les condenseurs DENSO, pour les applications plus récentes, disposent d'un système de filtre intégré qui garantit une plus grande efficacité de la climatisation.

Radiateurs de chauffage DENSO

Le radiateur de chauffage de l'habitacle est un petit radiateur qui intervient, du point de vue fonctionnel, dans le système de refroidissement moteur et en même temps dans le système de climatisation. En effet, ce composant qui exploite la chaleur produite par le moteur permet de chauffer l'air pulsé dans l'habitacle.

Le radiateur de chauffage est installé sur les véhicules équipés de climatisation ainsi que de chauffage seulement.

Intercoolers DENSO

L'intercooler est un échangeur de chaleur qui refroidit l'air comprimé d'alimentation du moteur dans les voitures équipées de turbocompresseur. L'utilisation d'intercoolers augmente de plus en plus en raison de la présence croissante de moteurs à suralimentation.

Les experts DENSO améliorent constamment la conception de nos intercoolers en mettant l'accent tout particulièrement sur la réduction de la consommation de carburant et des émissions.

Groupes moto-ventilateurs DENSO

Le rôle du groupe moto-ventilateur du moteur est d'augmenter la circulation d'air de refroidissement vers le radiateur. Bien qu'il soit généralement placé derrière l'échangeur de chaleur (radiateur), dans certaines configurations, il se trouve devant le radiateur pour augmenter le débit d'air de refroidissement à faibles vitesses ou à l'arrêt.

Les groupes moto-ventilateurs fonctionnent au moyen d'une électrovanne, contrôlée par des capteurs de température et de pression du liquide de refroidissement et activée uniquement selon les besoins. Les voitures climatisées nécessitent un groupe moto-ventilateur doté d'une électrovanne plus puissante. Les groupes moto-ventilateurs DENSO répondent aux besoins des véhicules les plus exigeants. Grâce à des calculs précis de la dynamique de fluides, ils sont également moins bruyants et plus performants.

Pulseurs DENSO

Comportant une hélice et un moteur électrique, Le pulseur a pour fonction de créer la masse d'air qui, par l'intermédiaire du groupe de climatisation (et notamment les échangeurs de chaleur qui le composent), est soufflée dans l'habitacle par le système de climatisation ou de chauffage.

La quantité d'air produite par le module est dépendante des caractéristiques de perméabilité au passage de l'air de chacun des composants du système de ventilation d'habitacle du véhicule, à savoir l'entrée d'air extérieur (sous le pare-brise), l'unité de climatisation, les gaines d'air dans le module de l'habitacle/cockpit et l'habitacle même.

Radiateurs d'huile DENSO

Le radiateur d'huile est un échangeur de chaleur qui régule la température des lubrifiants tels que l'huile du moteur, l'huile de la transmission et l'huile de la direction assistée dans le moteur.

Des températures trop élevées provoquent une détérioration rapide des propriétés lubrifiantes de l'huile, ce qui risque d'endommager les pièces mécaniques.

E

El sistema de refrigeración del motor

Cuando el motor de un vehículo está en marcha, sea éste diesel o de gasolina, no toda la energía del combustible se transforma en energía mecánica que desplaza el vehículo. Dependiendo del régimen de giro y de las condiciones de marcha del motor, alrededor del 30% de la “energía química” del combustible se dispersa en forma de calor producido por la combustión. Si no se controlara este calor, el incremento de temperatura producido podría poner en peligro la integridad estructural del propio motor.

La solución la ofrece el sistema de refrigeración del motor instalado en el vehículo. Su principal función es mantener la temperatura de las piezas metálicas del motor dentro de determinados límites con el fin de garantizar el mantenimiento de las prestaciones y fiabilidad del motor.

Varios tipos de intercambiadores de calor constituyen los principales componentes del sistema de refrigeración del motor, los cuales incluyen los radiadores de refrigeración, radiadores de calefacción, intercoolers, radiadores de aceite y condensadores, a los que se suman los ventiladores de refrigeración. Todos éstos toman la energía del combustible que no se transforma en energía mecánica para la propulsión del vehículo, y la dispersan en la atmósfera. Los intercambiadores de calor para automóviles están constituidos por un grupo de tubos de diámetro reducido por los que pasa el fluido a refrigerar. Los tubos disponen de aletas exteriores que facilitan la extracción del calor de los tubos por conducción, y su disipación en el aire del entorno por convección. Los tubos y las aletas de los intercambiadores de calor para automóviles son de metales ligeros con altos coeficientes de conductividad térmica, permitiendo el mecanizado de componentes delgados.

La diferencia de DENSO

Diseño avanzado. Prestaciones ultraeficientes. Fabricación con la calidad de los primeros equipos. Éstos son los valores excepcionales que respaldan los sistemas de refrigeración del motor de recambio de DENSO, transfiriendo la tecnología de los intercambiadores de calor avanzados directamente a la posventa.

No sólo uno de los mayores proveedores de componentes del automóvil en el mundo, DENSO es también un líder global en el desarrollo y fabricación de componentes y sistemas para la refrigeración del motor.

Ahora, estos conocimientos y experiencia de vanguardia están a la disposición del cliente de posventa en nuestro amplio programa de refrigeración del motor, el cual incluye radiadores de refrigeración, ventiladores de refrigeración, radiadores de calefacción, intercoolers, radiadores de aceite y condensadores.

Somos conscientes de que el rendimiento de un intercambiador de calor depende de las tecnologías empleadas. Por ello, las gamas de intercambiadores de calor de DENSO emplean tecnologías de construcción por soldadura y por conformación mecánica para ofrecer la solución óptima a cada vehículo. La soldadura produce una unión más cohesionada del tubo con la aleta, garantizando una transmisión de calor más eficiente. La tecnología de conformación mecánica, donde se prensan el tubo y la aleta, ofrece una unión con algo menos de contacto, pero con la ventaja de un coste más reducido. Cada radiador DENSO está especialmente desarrollado para el vehículo y el motor en los que vaya a montarse, sometiéndose a ensayos rigurosos para garantizar un alto rendimiento. Un radiador DENSO con un área frontal de 0,2 m^2, por ejemplo, tiene un área efectiva en sus aletas de refrigeración de más de 6 m^2.

Cuando necesite un recambio para la refrigeración del motor, sólo hay una elección: DENSO.

E

Tecnología avanzada

Radiadores de refrigeración DENSO

El radiador es el elemento central del sistema de refrigeración del motor, dispersando en la atmósfera el calor extraído del motor.

Normalmente, el radiador se encuentra en la parte frontal del vehículo, próximo a la toma de aire para así aprovechar el efecto aerodinámico de la velocidad con el vehículo en marcha.

En vehículos equipados con un sistema de aire acondicionado, el radiador será de dimensiones y capacidad mayores con el fin de poder disipar el calor descargado por el condensador. Los radiadores DENSO, desarrollados conjuntamente con especialistas en aire acondicionado, pueden satisfacer todo tipo de condiciones de trabajo, incluso en las condiciones ambientales más extremas.

Condensadores DENSO

El condensador es un intercambiador de calor que forma parte del sistema de aire acondicionado del vehículo. Su función es condensar el refrigerante del circuito de aire acondicionado.

Siendo un intercambiador de calor, la estructura del condensador es similar a la del radiador de refrigeración, pero debe resistir las elevadas presiones internas –hasta 25 bares– que se producen normalmente en los sistemas de aire acondicionado.

Los condensadores DENSO, particularmente en nuestras aplicaciones más recientes, tienen integrado un filtro para asegurar un mejor rendimiento del sistema de aire acondicionado.

Radiadores de calefacción DENSO

La función de este intercambiador de calor es suministrar calor al habitáculo del vehículo. De una manera simple, el refrigerante del motor pasa por el radiador de calefacción a temperatura elevada, suministrando el calor necesario cuando se pone el marcha el ventilador del habitáculo mediante el correspondiente mando en el salpicadero.

El radiador de calefacción se instala tanto en vehículos con aire acondicionado como en los que tienen sólo calefacción.

Intercoolers DENSO

El intercooler es un intercambiador de calor que enfría el aire que entra en la turbina de un motor turboalimentado. El empleo del intercooler está en crecimiento gracias a la mayor presencia de motores sobrealimentados.

Los especialistas de DENSO se dedican a la mejora constante del diseño y construcción de nuestros intercoolers, con especial énfasis en la reducción del consumo de combustible y las emisiones.

Ventiladores de refrigeración DENSO

La función del ventilador de refrigeración del motor es incrementar el caudal de aire que pasa por el radiador de refrigeración. Aunque normalmente se encuentra montado detrás del radiador, en algunas aplicaciones el ventilador de refrigeración se monta delante del radiador para así incrementar el caudal de aire a bajas velocidades de desplazamiento o con el vehículo parado.

El ventilador de refrigeración opera con una electroválvula controlada por sensores de temperatura y de presión del refrigerante, activándose sólo cuando es necesario. Los vehículos equipados con un sistema de aire acondicionado necesitan un ventilador de refrigeración con una electroválvula de mayor capacidad. Los ventiladores de refrigeración DENSO satisfacen las necesidades más extremas de los vehículos, y gracias a los métodos avanzados de cálculo de dinámica de fluidos empleados, garantizan también un nivel de ruido menor y un mayor rendimiento.

Ventiladores de habitáculo DENSO

Compuesto de un rotor y de un motor eléctrico, el ventilador del habitáculo –montado en la unidad de aire acondicionado del vehículo– genera el caudal de aire que pasa por la unidad de aire acondicionado y se suministra al habitáculo para enfriarlo o calentarlo.

El caudal de aire producido por el ventilador del habitáculo depende de las pérdidas de carga en cada uno de los elementos que componen el sistema de ventilación del habitáculo del vehículo, esto es, el colector de admisión de aire exterior montado debajo del parabrisas, la unidad de aire acondicionado, los conductos de aire en el habitáculo, y el habitáculo mismo.

Radiadores de aceite DENSO

El radiador de aceite es un intercambiador de calor que controla la temperatura del aceite empleado para la lubricación del motor, la caja de cambios y la dirección asistida.

Las temperaturas excesivamente elevadas llevan a la degradación del aceite lubricante, con el riesgo consiguiente de producirse averías mecánicas.

I

Il sistema termico motore

Durante il funzionamento di un motore per autoveicoli, sia a benzina che diesel, non tutta l'energia contenuta nel carburante si trasforma in potenza disponibile all'avanzamento del veicolo stesso. A seconda del regime del motore e delle condizioni di utilizzo della vettura, circa il 30% dell'energia "chimica" contenuta nel carburante viene dispersa sotto forma di calore generato dalla combustione. Se questo calore non viene controllato, l'aumento di temperatura che esso genera può raggiungere valori critici per l'integrità strutturale del motore stesso.

Il problema viene risolto dal sistema di raffreddamento del motore. Lo scopo principale del sistema di raffreddamento è di mantenere le temperature del metallo del motore entro i limiti previsti perché siano garantite le prestazioni e l'affidabilità del motore stesso.

I componenti principali del sistema di raffreddamento motore sono gli scambiatori di calore, che prendono la forma di radiatori, elettroventole, riscaldatori, intercooler, radiatori olio e condensatori. Tali dispositivi raccolgono quella parte dell'energia erogata dal carburante che non viene trasformata in energia meccanica disponibile per il moto del veicolo e la cedono all'atmosfera. Gli scambiatori di calore per autoveicoli sono costituiti da un fascio di tubi di dimensioni ridotte all'interno dei quali scorre il fluido caldo da raffreddare. Ai tubi sono fissate delle sottili alette che, per conduzione attraverso il metallo di cui sono costituite, "estraggono" il calore dei tubi e lo diffondono per convezione nell'aria che le lambisce. I tubi e le alette di uno scambiatore di calore automobilistico sono costituiti da metalli che offrono buona conducibilità, leggerezza e lavorabilità a spessori ridotti.

La differenza DENSO

Progettazione all'avanguardia. Performance ultra-efficiente. Prodotti qualitativamente identici ai componenti di primo impiego (OEM). Queste straordinarie qualità caratterizzano le linee di prodotti per il raffreddamento motore DENSO per il mercato dei ricambi originali (OES), e rendono le tecnologie più avanzate nel settore degli scambiatori di calore disponibili anche per il mercato Aftermarket.

DENSO, uno dei principali fornitori di componenti per l'industria automobilistica, è anche leader globale nello sviluppo e nella realizzazione di componenti e sistemi termici per i motori.

Ora, attraverso il nostro programma Termico motore qualità OEM, le competenze all'avanguardia maturate in questo settore sono disponibili anche per il mercato Aftermarket. Il programma include radiatori, elettroventole, riscaldatori, intercooler, radiatori olio e condensatori.

In DENSO siamo consapevoli del fatto che il rendimento di uno scambiatore di calore è legato alla tecnologia utilizzata.
La nostra gamma avanzata di scambiatori di calore utilizza sia la saldobrasatura che la deformazione meccanica (mandrinatura) per fornire al cliente la soluzione ideale per ogni singolo veicolo.
La saldobrasatura produce un contatto più 'intimo' tra tubo e aletta, e assicura una più efficiente trasmissione del calore. La deformazione meccanica, in cui il tubo viene semplicemente 'pressato' sull'aletta, garantisce un contatto meno solido, ma ha il vantaggio di un costo ridotto. Ogni radiatore DENSO è appositamente sviluppato per l'autovettura e il motore su cui dovrà essere montato ed è sottoposto a test estremamente rigorosi, per garantire il massimo rendimento possibile. Un radiatore DENSO con 0,2m^2 di superficie frontale ha in realtà una superficie di scambio sulle alette maggiore di 6m^2.

Se avete bisogno di un prodotto di ricambio per il raffreddamento del motore, la scelta è una sola: DENSO.

I

Tecnologie leader nel mondo

Radiatori DENSO

Il radiatore è il componente principale del sistema ed ha il ruolo importante di rilasciare all'atmosfera il calore raccolto dal liquido refrigerante in varie parti del motore.

Di norma il radiatore è collocato nella zona frontale del veicolo in corrispondenza delle prese d'aria, in maniera da sfruttare l'effetto dinamico della velocità di avanzamento.

Per le autovetture dotate di sistemi di climatizzazione si utilizzano radiatori più grandi e potenti per smaltire anche il calore che proviene dal condensatore. I radiatori DENSO, sviluppati insieme a esperti del settore del condizionamento, sono in grado di soddisfare qualsiasi esigenza operativa, anche nelle condizioni ambientali più difficili.

Condensatori DENSO

Il condensatore è uno scambiatore di calore che fa parte del sistema di climatizzazione del veicolo. La sua funzione è quella di condensare il refrigerante durante il ciclo di funzionamento del sistema A/C.

Il condensatore ha una struttura simile a quella del radiatore, ma deve sopportare pressioni interne di funzionamento più elevate (fino a 25 Bar) tipiche dei sistemi di climatizzazione.

I condensatori DENSO, soprattutto le più recenti applicazioni, sono dotati di un sistema filtrante integrato che garantisce un'efficienza ancora maggiore ai sistemi di climatizzazione.

Riscaldatori DENSO

Il compito di questo scambiatore di calore è riscaldare l'aria da inviare nell'abitacolo. Il processo è semplice: il refrigerante motore attraversa il riscaldatore ad alta temperatura e, quando la ventola viene attivata dal cruscotto, il calore viene convogliato nell'abitacolo.

Il riscaldatore viene installato sia nei veicoli dotati di climatizzazione che di solo riscaldamento.

Intercooler DENSO

L'intercooler è uno scambiatore di calore che raffredda l'aria compressa di alimentazione del motore nelle vetture dotate di turbocompressore. L'impiego degli intercooler è in aumento grazie alla sempre maggiore diffusione dei motori turbocompressi.

Gli specialisti DENSO sono costantemente impegnati al miglioramento del design degli intercooler, rivolgendo un'attenzione particolare allo sviluppo di soluzioni che consentano di ridurre i consumi di carburante e le emissioni.

Elettroventole motore DENSO

Il ruolo dell'elettroventola motore è quello di aumentare il flusso di aria fredda in direzione del radiatore. Anche se generalmente l'elettroventola viene posizionata dietro lo scambiatore di calore (radiatore), in alcune applicazioni viene posta davanti al radiatore per aumentare il flusso di aria di raffreddamento durante la marcia a bassa velocità o lo stazionamento.

L'elettroventola è attivata solo in caso di necessità per mezzo di un'elettrovalvola attivata da sensori che rilevano la temperatura del fluido di raffreddamento motore e la pressione del sistema di condizionamento dell'aria. Per le autovetture dotate di sistemi di climatizzazione si utilizzano elettroventole più potenti per aumentare il flusso di aria attraverso il radiatore. Le elettroventole DENSO sono in grado di soddisfare anche le esigenze dei veicoli più impegnativi e, grazie a un'accurata definizione fluidodinamica, garantiscono riduzione del rumore e aumento dell'efficienza.

Ventole abitacolo DENSO

Costituita essenzialmente da una girante e un motore elettrico, l'elettroventola abitacolo si trova all'interno del climatizzatore e svolge la funzione di generare la portata d'aria che attraversa il gruppo climatizzatore e che viene convogliata all'interno dell'abitacolo per riscaldarlo o raffreddarlo.

La quantità di aria generata dal modulo dipende dalle caratteristiche di permeabilità al passaggio dell'aria di ognuno dei sotto-moduli costituenti il sistema per la ventilazione dell'abitacolo del veicolo: la presa aria esterna (sotto il parabrezza), il climatizzatore, i condotti aria nell'abitacolo / plancia e lo stesso abitacolo.

Radiatori olio DENSO

Il radiatore olio è uno scambiatore che serve a tenere sotto controllo la temperatura dei lubrificanti di servizio, come l'olio motore, l'olio del cambio e l'olio del servosterzo.

Temperature troppo elevate fanno degradare rapidamente le caratteristiche lubrificanti dell'olio, con possibile rischio di danni agli organi meccanici.

SE

Motorkylsystemet

När en bilmotor körs (bensin eller diesel), omvandlas inte all energi i bränslet till kraft som driver fordonet framåt. Beroende på motorvarvtal och körförhållanden avgår omkring 30 % av den 'kemiska energi' som finns i bränslet i form av värme som uppstår vid förbränningen. Om värmen som uppstår inte regleras kan de höga temperaturerna som uppstår skada motorn.

Bilens kylsystem reglerar motorvärmen så att motorn inte skadas. Kylsystemets huvuduppgift är att hålla temperaturen i motorns metalldelar inom vissa gränser för att säkerställa motorns prestanda och tillförlitlighet.

Huvudkomponenterna i motorns kylsystem utgörs av värmeväxlare (inklusive kylare), kylfläktar, värmeelement, laddluftkylare, oljekylare och kondensatorer. Dessa tar den bränsleenergi som inte omvandlas till framdrivningskraft och överför energin till luften. Fordonsvärmeväxlare består av ett paket med små tuber som innehåller kylvätskan som ska kylas ned. På tuberna sitter tunna metallfenor som "extraherar" värmen från tuberna genom värmeledning och överför den till den omgivande luften genom värmeflöde. Tuberna och fenorna på fordonsvärmeväxlare är gjorda av metaller med god värmeledningsförmåga och låg vikt, så att även tunna ytor kan bearbetas.

Skillnaden med DENSO

Banbrytande konstruktion. Ultrahög prestanda. Tillverkade i OEM-kvalitet. Det här är de exceptionella standarder som ligger till grund för DENSO:s motorkylningssystem – värmeväxlarteknologi i världsklass direkt till eftermarknaden.

DENSO är inte bara en av världens största leverantörer av fordonskomponenter, utan även en global ledare när det gäller utveckling och tillverkning av motorkylkomponenter och –system.

Nu finns den här banbrytande expertisen tillgänglig för eftermarknadskunder i vårt omfattande utbud av motorkylare tillverkade i OE-kvalitet, ett utbud som bl.a. inkluderar kylare, kylfläktar, värmeelement, laddluftkylare, oljekylare och kondensatorer.

Vi förstår att prestationen hos värmeväxlare beror på vilken teknologi som används. DENSO:s avancerade värmeväxlarserier innefattar därför både hårdlödningsteknologi och mekanisk deformationsteknologi, för att tillhandahålla den bästa lösningen för varje fordon. Hårdlödning ger en 'tätare' kontakt mellan tub och fena och säkerställer en effektivare värmeöverföring. Mekanisk deformationsteknologi – där tuben "pressas" mot fenan – ger aningen sämre kontakt, men kostnaden är lägre. Varje kylare från DENSO är speciellt framtagen för den bil och motor den ska installeras i och testas grundligt, för att garantera goda prestanda. En kylare från DENSO med en frontarea på 0,2 m^2 t.ex., har mer än 6 m^2 kylningsarea på fenorna.

Så när du behöver byta en motorkylningsprodukt finns bara ett namn att välja på: DENSO.

SE

Världsledande teknologier

DENSO kylare

Kylaren är hjärtat i motorns kylsystem och överför värmen från motorn till luften.

Oftast är kylaren placerad längst fram i fordonet i närheten av luftintaget, för att utnyttja fartvinden under färd.

I fordon med luftkonditionering är kylaren större och kraftfullare för att avleda värmen från kondensorn. DENSO kylare – utvecklad tillsammans med luftkonditioneringsexperter – kan uppfylla alla driftmässiga krav, även i de svåraste miljöerna.

DENSO kondensatorer

Kondensorn är en värmeväxlare som utgör en del av fordonets luftkonditioneringssystem. Dess funktion är att kondensera kylmedlet under lutftkonditioneringscykeln.

Som värmeväxlare liknar kondensorns uppbyggnad kylarens, men måste kunna motstå de höga inre tryck (upp till 25 bar) som normalt förekommer i luftkonditioneringssystem.

DENSO kondensatorer, speciellt våra senaste tillämpningar, har ett integrerat filtersystem för att garantera ännu högre effektivitet i luftkonditioneringssystemet.

DENSO värmeelement

Värmeväxlarens uppgift är att tillföra värme till kupén. I en enkel process förs kylvätska med hög temperatur förbi värmaren och tillför värme när fläktreglagets kupé är påslaget på instrumentbrädan.

Ett värmeelement finns installerat både i fordon med klimatanläggning och i fordon med endast värmare.

DENSO laddluftkylare

Laddluftkylaren är en värmeväxlare som kyler ner luften som kommer in i turbinen i en motor med turboaggregat. Användningen av laddluftkylare ökar tack vare allt fler turboladdade motorer.

DENSO: s experter förbättrar kontinuerligt våra laddluftkylares konstruktion, med speciellt fokus på att åstadkomma minskad bränsleförbrukning och lägre utsläpp.

DENSO kylfläktar

Motorkylfläktens roll är att öka flödet av kylluft som når kylaren. Även om kylfläkten normalt är placerad bakom värmeväxlaren (kylaren), sitter den i vissa tillämpningar framför kylaren för att öka flödet av kylluft vid långsam färd eller stillastående.

Kylfläktarna använder en magnetventil som styrs av temperaturgivare och givare för kylvätsketryck och aktiveras endast vid behov. Bilar utrustade med luftkonditioneringssystem kräver en kylfläkt med kraftigare magnetventil. DENSO kylfläktar klarar även de mest krävande fordonstillämpningar. Tack vare enheternas noggrant beräknade flödesdynamik är de också effektivare och låter mindre.

DENSO kupéfläktar

Kupéfläkten, som innehåller en impeller och en elektrisk motor och är placerad i fordonets luftkonditioneringssystem, genererar ett luftflöde som passerar igenom luftkonditioneringsenheten in i kupén för att värma upp eller kyla ned den.

Hur mycket luft som genereras av kupéfläkten beror på luftpermeabiliteten hos varje komponent som utgör fordonets kupéfläktsystem, dvs. det utvändiga luftintaget (nedanför vindrutan), luftkonditioneringsenheten, luftkanalerna i kupé-/förarplatsmodulen och själva kupén.

DENSO oljekylare

Oljekylaren är en värmeväxlare som reglerar temperaturen hos smörjmedel som motorolja, växellådsolja och hydraulolja i motorn.

Höga temperaturer leder till en snabb försämring av oljans smörjegenskaper, med risk för skador på mekaniska delar som följd.

PL

Systemy chłodzenia silnika

Gdy pracuje silnik samochodu, zarówno wysokoprężny, jak i benzynowy, nie przetwarza on całej energii zawartej w paliwie w moc, która napędza samochód. W zależności od obrotów i warunków pracy silnika, około 30% „energii chemicznej“ zawartej w paliwie rozprasza się w postaci ciepła generowanego podczas spalania. Jeśli to ciepło nie jest kontrolowane, powoduje wzrost temperatury, który może negatywnie wpływać na integralność samego silnika.

Problem ten rozwiązuje system chłodzenia silnika. Jego głównym zadaniem jest utrzymywanie temperatury metalowych elementów silnika w pewnych granicach celem zapewnienia stałych osiągów i niezawodności silnika.

Głównymi elementami systemu chłodzenia silnika są wymienniki ciepła, w tym chłodnice silnika, wentylatory chłodnic, rdzenie nagrzewnic, chłodnice powietrza doładowanego, chłodnice oleju i skraplacze. Elementy te odbierają tę część energii paliwa, która nie została przetworzona w moc napędzającą samochód i rozpraszają ją do otoczenia. Samochodowe wymienniki ciepła składają się z wiązek cienkich rurek, przez które przypływa gorący płyn, poddawany chłodzeniu. Na rurkach znajdują się cienkie metalowe żebra, które w wyniku przewodzenia odbierają od rurek ciepło, rozpraszane następnie w procesie konwekcji do powietrza z otoczenia. Rurki i żebra samochodowych wymienników ciepła wykonane są z lekkich metali o wysokiej przewodności cieplnej, pozwalających na wykonanie cienkich elementów o równej powierzchni.

Różnica DENSO

Pionierska konstrukcja. Super wydajność. Produkcja o jakości OE. Są to wyjątkowe standardy, które stoją za zamiennymi elementami systemów chłodzenia firmy DENSO – wprowadzając światowej klasy technologię wymiany ciepła na rynek wtórny.

Firma DENSO jest nie tylko jednym z największych producentów części dla przemysłu motoryzacyjnego, ale także światowym liderem w dziedzinie rozwoju i produkcji systemów chłodzenia silników i elementów tych systemów.

Obecnie te pionierskie osiągnięcia są dostępne dla klientów rynku wtórnego w szerokiej gamie produktów jakości OE, oferowanych w ramach programu chłodzenia silnika, który obejmuje chłodnice silnika, wentylatory chłodnic, rdzenie nagrzewnic, chłodnice powietrza doładowanego, chłodnice oleju i skraplacze.

Wiemy, że wydajność wymiany ciepła zależy od stosowanej technologii. Zaawansowane technologie produkcji wymienników ciepła DENSO obejmują zarówno lutospawanie, jak i mechaniczne odkształcanie, zapewniające idealne rozwiązania dla każdego pojazdu. Lutospawanie umożliwia uzyskanie „ściślejszego “kontaktu rurki z żebrem i zapewnia wyższą wydajność przenoszenia ciepła. Technologia mechanicznego odkształcania – polegająca na „wciskaniu “rurki w żebro – oferuje mniej ścisły kontakt, ale jej zaletą jest niższy koszt. Każda chłodnica silnika DENSO jest opracowana specjalnie dla samochodu i silnika, w którym jest montowana a surowe testy, jakim podlega, gwarantują wydajność. Przykładowo, żebra chłodnicy silnika DENSO z powierzchnią czołową 0,2 m^2 posiadają powierzchnię chłodzenia przekraczającą 0,6 m^2.

Dlatego, gdy konieczna jest wymiana elementu systemu chłodzenia silnika, wybór jest tylko jeden: DENSO.

PL

Przodujące w świecie technologie

Chłodnice silnika DENSO

Chłodnica silnika, serce systemu chłodzenia, odbiera ciepło z silnika i oddaje je do otoczenia.

Zazwyczaj chłodnica silnika jest umieszczona z przodu pojazdu, w pobliżu wlotu powietrza, w celu wykorzystania dynamiki prędkości, z jaką porusza się samochód.

W pojazdach wyposażonych w układ klimatyzacji, chłodnica silnika jest większa i bardziej wydajna, aby umożliwić rozproszenie ciepła pochodzącego ze skraplacza. Chłodnice silnika DENSO – opracowane wspólnie z ekspertami z dziedziny klimatyzacji – mogą spełnić każde wymagania robocze, stawiane nawet w najtrudniejszych warunkach.

Skraplacze DENSO

Skraplacz jest wymiennikiem ciepła wchodzącym w skład układu klimatyzacji pojazdu. Jego funkcja polega na skraplaniu czynnika chłodniczego w obiegu układu klimatyzacji.

Skraplacz, jako wymiennik ciepła, zbudowany jest podobnie, jak chłodnica silnika. Musi on jednak wytrzymać wysokie ciśnienie wewnętrzne (do 25 barów), które jest typowe dla układów klimatyzacji.

Skraplacze DENSO, szczególne nasze najnowsze rozwiązania, posiadają wbudowany system filtracyjny zapewniający jeszcze wyższą wydajność układu klimatyzacji.

Rdzenie nagrzewnic DENSO

Zadaniem nagrzewnicy jest dostarczanie ciepła do kabiny pojazdu. W prostym procesie, gorąca ciecz chłodząca silnik przepływa przez nagrzewnicę i dostarcza ciepło, po uruchomieniu (za pomocą elementu sterującego, znajdującego się na desce rozdzielczej) wentylatora nawiewu powietrza do kabiny.

Rdzeń nagrzewnicy montowany jest zarówno w pojazdach z klimatyzacją, jak i w pojazdach wyposażonych tylko w system ogrzewania.

Chłodnice powietrza doładowanego DENSO

Chłodnica powietrza doładowanego jest wymiennikiem ciepła, która chłodzi powietrze dopływające do silnika z turbosprężarki. Zastosowanie chłodnic powietrza doładowanego rośnie dzięki coraz większej liczbie silników z doładowaniem.

Eksperci z firmy DENSO stale udoskonalają konstrukcję naszych chłodnic powietrza doładowanego, skupiając się w szczególności na zmniejszeniu zużycia paliwa i emisji szkodliwych substancji.

Wentylatory chłodnic DENSO

Rola wentylatora w układzie chłodzenia silnika polega na zwiększeniu przepływu powietrza chłodzącego przez chłodnicę silnika. Wentylator jest zwykle umieszczony za wymiennikiem ciepła (chłodnicą silnika). Jednak w niektórych rozwiązaniach wentylator umieszcza się przed chłodnicą silnika, aby zwiększyć przepływ powietrza chłodzącego w sytuacji, gdy pojazd jedzie powoli lub stoi.

Wentylatory chłodnicy uruchamiane są za pomocą zaworu elektromagnetycznego, sterowanego przez czujniki temperatury i ciśnienia cieczy chłodzącej i tylko wtedy, gdy występuje taka potrzeba. Samochody wyposażone w układ klimatyzacji wymagają stosowania wentylatora chłodnicy z zaworem elektromagnetycznym większej mocy. Wentylatory chłodnic DENSO spełniają potrzeby najbardziej wymagających pojazdów. Dzięki dokładnym obliczeniom dynamiki przepływu płynów zapewniają również obniżony poziom hałasu i podwyższoną sprawność.

Dmuchawy kabinowe DENSO

Dmuchawy kabinowe, w których skład wchodzi wirnik i silnik elektryczny, umieszczone w klimatyzatorze samochodu, doprowadzają powietrze przez klimatyzator do wnętrza kabiny celem jego schłodzenia lub ogrzania.

Ilość powietrza tłoczonego przez dmuchawę kabinową zależy od przepuszczalności powietrza poszczególnych elementów wchodzących w skład systemu wentylacji kabiny a mianowicie zewnętrznego wlotu powietrza (pod przednią szybą), klimatyzatora, kanałów powietrza w kabinie/module kokpitu i samej kabiny.

Chłodnice oleju DENSO

Chłodnica oleju jest wymiennikiem ciepła, który reguluje temperaturę środków smarnych, takich jak olej silnikowy i olej przekładniowy oraz płynu hydraulicznego układu wspomagania kierownicy.

Nadmierne wysokie temperatury prowadzą do szybkiej utraty własności smarnych oleju grożącej uszkodzeniem części mechanicznych.

RU

Система охлаждения двигателя

При работе двигателя, как дизельного, так и бензинового, не вся энергия, образующаяся при сгорании топлива, преобразуется в мощность. В зависимости от количества оборотов двигателя и условий его эксплуатации около 30% энергии топлива рассеивается в виде тепла, образующегося при сгорании. Если этот процесс не контролировать, то возрастающая температура может привести к выходу двигателя из строя.

За решение данной проблемы отвечает система охлаждения двигателя автомобиля, основное назначение которой состоит в поддержании его температуры в заданных пределах, что гарантирует надежность и неизменность рабочих характеристик.

К основным компонентам системы охлаждения двигателя относятся теплообменники, включая радиаторы, охлаждающие вентиляторы, радиаторы отопителя, промежуточные охладители, масляные радиаторы и конденсоры. Они поглощают энергию топлива, которая не была преобразована в мощность, и отдают ее в атмосферу. Автомобильные теплообменники представляют собой пучок трубок, внутри которых находится горячая охлаждающая жидкость, подвергающаяся охлаждению. Тонкие металлические ребра, расположенные на трубках, «вытягивают» тепло из трубок благодаря высокой теплопроводности и отдают его окружающей среде за счет конвекции. Трубки и ребра автомобильных теплообменников изготавливаются из металлов, обладающих высокой теплопроводностью, имеющих малый вес и позволяющих обрабатывать даже тонкие пластины.

В чем отличие DENSO?

Инновационный дизайн. Максимально эффективные рабочие характеристики. Оригинальное качество. Таких стандартов придерживается компания DENSO при производстве компонентов системы охлаждения двигателя, делая доступными на вторичном рынке автозапчастей технологии высочайшего уровня.

Компания DENSO, один из крупнейших в мире поставщиков автокомпонентов, является лидером в сфере разработки и производства систем охлаждения двигателя и их отдельных компонентов.

Теперь инновационные разработки расширенного ассортимента системы охлаждения двигателя DENSO оригинального качества доступны и на вторичном рынке, включая радиаторы, охлаждающие вентиляторы, радиаторы отопителя, промежуточные охладители, масляные радиаторы и конденсаторы.

Эффективность работы теплообменников в значительной степени зависит от используемых технологий. Именно поэтому при производстве современных теплообменников DENSO используются методы пайки и механической деформации, что позволяет разработать идеальное решение для каждого автомобиля. Пайка обеспечивает плотное прилегание ребра к трубке и более эффективную теплопередачу. При использовании технологии механической деформации трубы прижимаются к оребрению чуть менее плотно, однако стоимость детали при этом существенно снижается. Каждый радиатор DENSO специально разрабатывается для конкретной модели автомобиля и двигателя и подвергается жесткому тестированию, что гарантирует его эффективную работу. Радиатор DENSO с площадью фронтальной поверхности 0,2 кв. м, например, имеет площадь охлаждающей поверхности свыше 6 кв. м.

Если в вашем автомобиле необходимо заменить компоненты системы охлаждения двигателя, есть только одно имя – DENSO.

RU

Ведущие мировые технологии

Радиаторы охлаждения DENSO

Радиатор является «сердцем» системы охлаждения двигателя, его функция – отводить в атмосферу поглощенное тепло двигателя.

Обычно радиатор располагается в передней части автомобиля рядом с воздухозаборником, чтобы использовать встречный воздушный поток при движении автомобиля.

Если же автомобиль оснащен системой кондиционирования воздуха, то для рассеивания тепла, идущего от конденсора, нужно использовать более мощный и больший по размеру радиатор. Радиаторы DENSO, разработанные в сотрудничестве со специалистами по системам кондиционирования, рассчитаны на эксплуатацию даже в самых сложных природных условиях.

Конденсоры DENSO

Конденсатор — теплообменник, входящий в состав системы кондиционирования автомобиля. Его функция состоит в конденсации хладагента в контуре кондиционирования.

Поскольку конденсор является теплообменником, его конструкция аналогична конструкции радиатора, но при этом он должен выдерживать высокое внутреннее давление (до 25 атм), обычное для систем кондиционирования воздуха.

Некоторые новейшие модели конденсоров DENSO оснащены встроенной системой фильтрации, что делает системы кондиционирования воздуха еще более совершенными.

Радиаторы отопителя DENSO

Задача данного теплообменника – подавать тепло в салон автомобиля. Упрощенная схема его работы выглядит таким образом: охлаждающая жидкость при высокой температуре проходит через обогреватель, который подают теплый воздух в салон при включении на панели режима обогрева.

Радиатор отопителя устанавливается в автомобили как с системой климат-контроля, так и с обычным обогревом.

Промежуточные охладители DENSO

Промежуточный охладитель представляет собой теплообменник, который охлаждает воздух, поступающий в турбину двигателя с турбонаддувом. Промежуточные охладители находят все более широкое применение благодаря постоянному росту количества автомобилей, оснащенных двигателями с турбонаддувом.

Специалисты компании DENSO постоянно совершенствуют конструкцию промежуточных охладителей, уделяя при этом особое внимание уменьшению расхода топлива и сокращению выбросов.

Охлаждающие вентиляторы DENSO

Функция охлаждающего вентилятора состоит в увеличении потока холодного воздуха, который поступает к радиатору. Несмотря на то, что обычно он располагается позади теплообменника (радиатора), в некоторых моделях автомобилей охлаждающие вентиляторы размещаются перед радиатором, что способствует увеличению потока охлаждающего воздуха при медленном движении автомобиля и во время стоянки.

Охлаждающие вентиляторы подключаются через электромагнитную муфту, которая управляется датчиками температуры или давления и включается только тогда, когда это необходимо. Автомобили, оснащенные системой кондиционирования воздуха, требуют установки охлаждающего вентилятора с более мощной электромагнитной муфтой. Охлаждающие вентиляторы DENSO отвечают самым жестким требованиям. Благодаря точным аэродинамическим расчетам они обеспечивают пониженный уровень шума и высокую эффективность.

Вентиляторы салона DENSO

Нагнетательный вентилятор с крыльчаткой и электродвигателем монтируется внутри системы кондиционирования автомобиля и создает поток воздуха, проходящий через кондиционер внутрь салона, охлаждая или нагревая воздух в нем.

Количество воздуха, нагнетаемого таким вентилятором, зависит от воздухопроницаемости каждого из компонентов, составляющих систему вентиляции салона; сюда относятся наружный воздухозаборник (под лобовым стеклом), кондиционер, воздуховоды внутри кабины или салона и сам салон.

Масляные радиаторы DENSO

Масляный радиатор – теплообменник, регулирующий температуру смазочных жидкостей в двигателе, а именно моторного масла, смазочных жидкостей систем коробки передач и рулевого управления.

Слишком высокая температура приводит к быстрому ухудшению смазочных свойств масла, что несет потенциальную опасность повреждения механических деталей.

Disclaimer

In order to find the right DENSO product for your application, please refer to the original part number (OEM) on the part and find the corresponding DENSO part number in the cross reference table. In case you do not have the original part number (OEM) then it is best to find the right DENSO product for the application in the application tables.

The recommendations in this catalogue are based on the latest information from manufacturers for operating under standard conditions. We do not accept any responsibility of legal claims arising out of the contents of this list. The DENSO products listed in this catalogue can be used in vehicles which we recommend in the catalogue. Recognisable mistakes, such as printing errors, are subject to careful scrutiny by the user.

In the event of any damage which is solely and directly attributable to a manufacturing defect in a DENSO product, DENSO will pay the cost of repair to a condition equivalent to that existing before the failure. This does not include breakdown or damage caused by improper installation, disassembly, reconstruction, repair, usage or modification of the DENSO products as well as breakdown or damage caused by other products or parts.

D

Haftungsausschluss

Um das richtige DENSO-Produkt für Ihre Anwendung zu finden, notieren Sie sich bitte die Originalteilnummer (OEM) an dem betreffenden Bauteil. Suchen Sie dann in der Vergleichstabelle die entsprechende DENSO-Teilnummer. Sollten Sie die Originalteilnummer (OEM) nicht zur Hand haben, dann empfehlen wir Ihnen, das richtige DENSO-Produkt für Ihre Anwendung aus den Anwendungstabellen herauszusuchen.

Die Empfehlungen in diesem Katalog basieren auf den neuesten Informationen von Herstellern, die unter Standardbedingungen arbeiten. Für Rechtsansprüche, die sich aus dem Inhalt dieser Liste ergeben, übernehmen wir aber keine Haftung. Die in diesem Katalog angeführten DENSO-Produkte können in den Fahrzeugen verwendet werden, die wir im Katalog empfehlen. Druckfehler und Irrtümer vorbehalten.

Im Fall von Schäden, die ausschließlich und direkt auf einen Fertigungsfehler an einem DENSO-Produkt zurückzuführen sind, kommt DENSO für die Kosten einer Reparatur zur Wiederherstellung auf den vor dem Ausfall/Schaden vorliegenden Zustand auf. Dies gilt aber weder für Ausfall und Schäden, die durch unsachgemäße(n) Einbau, Zerlegung, Wiederherstellung, Reparatur, Gebrauch oder Änderung von DENSO-Produkten verursacht werden, noch für Ausfall und Schäden, die durch andere Produkte oder Bauteile verursacht werden.

F

Avis de non-responsabilité

Afin de sélectionner le produit DENSO convenant à votre application, veuillez vous référer au numéro d'origine (OEM) sur la pièce et trouver le numéro DENSO correspondant dans le tableau des références croisées. Si vous n'avez pas le numéro de pièce d'origine (OEM) il est préférable de trouver le produit DENSO qui convient à l'application dans les tableaux d'applications.

Les recommandations figurant dans ce catalogue sont fondées sur les informations les plus récentes des constructeurs pour un fonctionnement dans des conditions standards. Nous ne saurions être tenus responsables d'aucune réclamation de nature juridique résultant du contenu de cette liste. Les produits DENSO cités dans ce catalogue peuvent être utilisés dans les véhicules que nous recommandons dans le catalogue. Il appartient à l'utilisateur de tenir compte des erreurs notables, telles que les erreurs d'impression.

En cas de dommages exclusivement et directement imputables à un défaut de fabrication dans un produit DENSO, DENSO prendra en charge les frais de remise à un état équivalent à celui du produit avant la défaillance. Ceci n'inclut pas les pannes ou les dommages causés par une intervention incorrecte d'installation, démontage, reconstruction, réparation, usage ou modification de produits DENSO ni les pannes ou les dommages causés par d'autres produits ou pièces.

E

Exención de responsabilidad

Para encontrar el producto DENSO indicado para su aplicación, remítase al número de referencia de la pieza de origen –el primer equipo– y obtenga el correspondiente número de referencia DENSO en la tabla de equivalencias. En caso de no tener el número de referencia de la pieza de origen, se recomienda obtener el producto DENSO indicado para la aplicación en las correspondientes tablas de aplicaciones.

Las recomendaciones expresadas en el presente catálogo están basadas en la más reciente información de los fabricantes para condiciones normales de uso. No se aceptará ninguna responsabilidad en caso de reclamaciones derivadas del contenido de la presente lista. Los productos DENSO citados en el presente catálogo pueden usarse con los vehículos recomendados en dicho catálogo. Los errores evidentes, tales como las erratas de imprenta, que pudiera haber están sujetos al debido escrutinio por parte del usuario.

En el caso de producirse daño alguno que fuera directa y exclusivamente atribuible a un defecto de fabricación de un producto DENSO, DENSO abonará el coste de reparación para el restablecimiento del estado presente inmediatamente antes del fallo o la avería. Esto no incluye las averías o los daños causados por el montaje, desmontaje, reconstrucción, reparación o modificación indebidos de productos DENSO, así como las averías o daños causados por otros productos o piezas.

I

Clausola di esclusione

Per trovare il prodotto DENSO appropriato per la propria applicazione, si prega di fare riferimento al numero del componente originale (OEM) e di cercare il numero del componente DENSO corrispondente nella tabella a riferimento incrociato. Se non si dovesse disporre del numero del pezzo originale (OEM) si consiglia di cercare il prodotto DENSO corretto per la relativa applicazione nella tabella delle applicazioni.

Le raccomandazioni contenute in questo catalogo sono state prodotte in base alle ultime informazioni per il funzionamento in condizioni normali rilasciate dai costruttori. DENSO declina ogni responsabilità relativamente a cause legali o richieste di indennizzo per danni causati dal contenuto di questa lista. I prodotti DENSO elencati in questo catalogo possono essere usati nei veicoli raccomandati nel catalogo. L'utilizzatore ha la responsabilità di controllare rigorosamente eventuali inesattezze o errori, ad esempio errori di ortografia o di stampa, prima di fare la propria scelta.

In caso di danni che sono esclusivamente e direttamente attribuibili a un difetto di lavorazione di un proprio prodotto, DENSO si impegna a pagare il costo della riparazione necessaria a riportare il prodotto danneggiato nelle stesse condizioni in cui si trovava prima del guasto. Tale garanzia non include i guasti o i danni causati da difetti di installazione, smontaggio, ricostruzione e riparazione, uso improprio o modifica dei prodotti DENSO o i guasti o i danni causati da altri prodotti o parti.

SE

Friskrivningsklausul

Se originaldelens artikelnummer (OEM) för att hitta rätt DENSO-produkt för en tillämpning, och hitta motsvarande DENSO-artikelnummer i krosslistan. Om du inte har originaldelens artikelnummer (OEM) är det bäst att hitta rätt DENSO-produkt för tillämpningen i tillämpningstabellerna.

Rekommendationerna i den här katalogen baseras på den senaste informationen från tillverkare och gäller användning under normala förhållanden. Vi accepterar ingen ansvarsskyldighet gällande rättsliga krav som uppkommer på grund av innehållet i denna lista. DENSO-produkterna som listas i den här katalogen kan användas i fordon som vi rekommenderar i katalogen. Igenkännbara misstag, som tryckfel, ska kontrolleras noga av användaren.

I händelse av skada som enbart och direkt kan härledas till en tillverkningsdefekt hos en DENSO-produkt, betalar DENSO kostnaden för reparationen, till ett motsvarande skick som före skadan. Detta inkluderar inte haveri eller skada orsakad av felaktig installation, demontering, renovering, reparation, användning eller modifiering av DENSO-produkterna och inte heller haveri eller skada orsakad av andra produkter eller delar.

PL

Zrzeczenie się odpowiedzialności

Aby znaleźć produkt DENSO, który będzie odpowiedni dla danego zastosowania, prosimy ustalić numer części oryginalnej (OEM) umieszczony na tej części, a następnie znaleźć odpowiedni numer katalogowy DENSO w tabeli odnośników. W przypadku braku numeru oryginalnej części (OEM) najlepszym rozwiązaniem jest znalezienie odpowiedniego produktu DENSO w tabeli zastosowań.

Zalecenia podane w niniejszym katalogu oparte są o najnowsze informacje producentów dotyczące pracy w warunkach standardowych. Nie ponosimy żadnej odpowiedzialności za reklamacje wynikające z treści niniejszego zestawienia. Produkty DENSO wyszczególnione w niniejszym katalogu mogą być stosowane w pojazdach, zgodnie z zalecaniami katalogu. Wszelkie widoczne błędy, np. drukarskie, muszą być dokładnie sprawdzane przez użytkownika.

W przypadku uszkodzenia, które wynika wyłącznie i bezpośrednio z wady wykonania wyrobu DENSO, firma DENSO pokryje koszt naprawy wyrobu do stanu sprzed uszkodzenia. Powyższe nie obejmuje awarii lub uszkodzeń spowodowanych przez niewłaściwy montaż, demontaż, przebudowę, naprawę, modyfikację lub niewłaściwe użytkowanie produktu DENSO oraz awarii i uszkodzeń spowodowanych przez inne produkty lub elementy.

RU

Ограничение ответственности

Для правильного подбора компонентов, пожалуйста, посмотрите код оригинальной детали (OEM) (он есть на оригинальной запчасти) и найдите соответствующий код детали DENSO в таблице соответствия. При отсутствии кода оригинальной детали (OEM) обратитесь к таблицам вариантов применения DENSO.

Рекомендации, данные в настоящем каталоге, основаны на самой последней информации, полученной от автопроизводителей, и касаются стандартных условий эксплуатации. Компания не несет ответственности по искам, связанным с содержанием таблицы применимости. Перечисленная в каталоге продукция DENSO может быть применена в моделях, рекомендуемых нами в этом каталоге. Очевидные ошибки, в том числе опечатки, требуют тщательной проверки пользователем каталога.

В случае любого ущерба, исключительно и непосредственно связанного с производственным дефектом продукции DENSO, компания DENSO оплатит стоимость работ по приведению автомобиля в состояние, в котором он находился до поломки. Данное положение не касается поломок и ущерба, явившихся следствием неправильного монтажа, демонтажа, модернизации, ремонта, пользования или модификации оборудования DENSO, а также поломок и ущерба, обусловленных влиянием другого оборудования и деталей.
